Important Information

Product Specifications

Product specifications in this catalog are current as of March 2026 and are subject to change or discontinuation without prior notice due to various circumstances and quality improvements.

Product Delivery

Please note that delivery may be delayed or items may be backordered for extended periods due to inventory availability or product improvements.

Product Colors

Colors shown may vary slightly from the actual product due to printing.

Returns & Exchanges

For returns or exchanges requested by the customer, shipping fees, packaging costs, restocking fees, and other related charges may apply. Please also note that some items may not be eligible for return or exchange.

Heat Resistance Temperature Ratings for Plastic Products

Heat resistance temperature ratings do not guarantee suitability for use in dishwashers, hot-air drying cabinets, or similar equipment. Actual performance may vary depending on the material properties, manufacturing process, frequency of use, machine performance, detergent composition, and other conditions. When using these products, please refer to the quality labels on the actual product and the instruction manuals of the appliances used, and make your own judgment. Extra caution is required when using commercial equipment.

The Japan's three biggest production center.

日本三大産地

堺 Sakai

The skills of forging steel first came to Sakai in the 5th century, during the Kofun period. The Kofun period is when kings had hook-shaped monuments built as their tombs. Like the pyramids of Egypt, the size of the tomb was representative of the king's power, and they competed to have the biggest tombs. About A.C.50, blacksmiths were gathered to Sakai area from all across Japan to make hoes and spades for building the massive tomb of the emperor. Since then Sakai has been at the center of metal manufacturing. At the end of the Heian period, Sakai has started involving in sword making and during Sengoku period it became the production center for rifles introduced by Portuguese. Sakai's technological capabilities were rated so highly that those in power at the time competed to place it under control. During the Edo period, the Tokugawa Shogunate recognized the quality of Sakai's tobacco knives and produced special stickers to mark genuine Sakai products so that they could differentiate them from other knives. By this measure, the reputation of Sakai products soon spread throughout Japan. These skills have been passed down from generation to generation, and at present Sakai Knives are designated as a traditional craft by the government.

The manufacturing processes of Sakai Knives can be roughly classed as forging, grinding the blade, and attaching the handle. The artisans are in charge of each of these 3 processes. Their exceptional skills, as well as the time and the effort invested by the many craftsmen made it possible to produce a beautiful work of art with incredible cutting edge.

関 Seki

During the Kamakura period, a swordsmith in Kyushu region named Motoshige, sought the type of iron that was suitable for making blades as well as the high quality water and clay that was necessary to quench them. He moved and settled in Seki area, and started making Japanese swords. Since then Seki has produced numerous artisans and it became the capital of sword making. Seki swords were especially favored by militally commanders because the products were said to be "They do not break or bend, and they cut well." Since the Meiji restoration, the focus has shifted from sword making to the manufacture of practical items such as knives, scissors, pocket knives, and shavers. Nowadays Seki knives are sold not only within Japan but also all over the world, and "Seki" has a reputation as a knife producing region that is equivalent to that of Solingen in Germany. Seki knives incorporate new technologies and materials while building on a base of traditional craftsmanship.

燕三条 Tsubame Sanjo

Blade production has long foamed the core of local industry in Sanjo city. In the early Edo period, the area around Sanjo city was actively being developed as new farmland and the demand for farming implements such as hoes and sickles were rising. To meet the demand, blade production techniques drastically developed and in the Meiji period, the neighbouring Tsubame area began producing cutlery. Since the Showa period, stainless steel products widely spread and Tsubame Sanjo has become a global production center for stainless steel cutlery and kitchen tools. They specialize in stainless steel knives and uniquely designed knives, and their sales are increasing.

Wood-Core, Blade-Friendly Cutting Board The BEST cutting board ever for Japanese knives.
As it comes with a wooden core structure and does not deform, the plastic material used on its surface is very soft. Despite the plastic material, we are able to achieve the same level of blade friendliness to that of a wooden cutting board. This is a Cutting Board that is ideal for delicate, Japanese knives.

Wood-Core, Soft Surface Cutting Board

The lightweight version of the FSR series.
Compact yet High-spec.
Also good for Home-Use.

Rubber cutting board in a compact size

Chosen in Japanese kitchens for over half a century
Not only chefs, but also food wholesalers use this!

The reason for their popularity is their excellent quality.
The rubber's elasticity provides resilience, making it resistant to deep scratches (refer to the figure below).
Furthermore, it has low water absorption and dries quickly.

This resin hangiri is exceptionally lightweight and durable, with excellent heat retention properties. It is easy to use.

- The interior foam resin is superior to heat retention that is important during sushi-rice mixing.
- This angle makes it stackable, and prevents contaminants from accumulating in the internal corners.

An internal foam structure helps keeping rice warm. It was shown to have higher heat retention capacity compared to wooden Ohitsu! The plastic surface is stain resistant and easy to clean. Unlike wooden products, it does not develop black mold or wood chips. The light weight also makes your cleaning work much easier!

Nitrided Iron Frying Pan

Spin Forming

We've made heavy, unwieldy iron lighter while maintaining its thermal conductivity and strength.

Nitriding process

- Oil-friendly, becoming less prone to sticking with use
- Rust-resistant, requiring only washing and drying for maintenance
- Applying oil extends its lifespan
- Resistant to acids and alkalis, safe for any food or seasoning
- Scratch and deformation resistant, durable and long-lasting

Black Iron Frying Pan

Resistant – A black oxide layer protects the iron surface for superior durability and rust resistance.

Lifetime – With continued use, oil seasoning improves naturally, reducing sticking and enhancing usability.

Ready to Use – The silicone coating prevents rust and eliminates the need for pre-seasoning.

Note – The coating is hygienically safe.

Grater

Material	Features	Ease of producing spiciness
Red Stingray	Ultra-fine grated texture (creamy consistency). Brings out aroma and umami.	★
Stainless steel	Finish is slightly fine to medium. Rust-resistant and durable.	★★
Copper	The ingredients separate well, resulting in a fluffy texture that brings out the natural sweetness.	★
Aluminum	Medium texture with a slight fibrous feel. Lightweight and easy to handle.	★★★
Bamboo	The fibers remain firm, offering a coarse texture that's enjoyable to chew.	★
Ceramic	It has no metallic odor, is resistant to acids, and retains its aroma well.	★★

The copper grater used by the ultimate professional

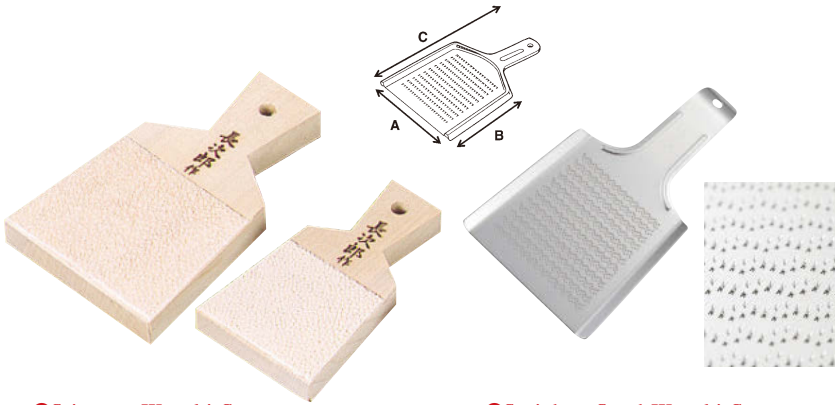

“Honmedate”

A traditional technique dating back to the Edo period, each blade is individually hammered and shaped, and it creates unmatched sharpness.

Robust Body

Reinforced with special power press molding. Furthermore, edges, recesses, and angles are formed and finished. The handle is meticulously polished to achieve uniform color.

Vegetable Cutter

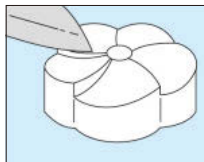

Slice the ingredients into rounds of your preferred thickness.

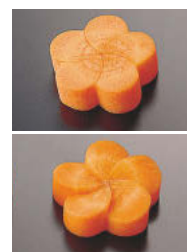

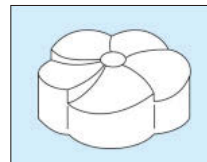

Press the cutter evenly into the center of the food ingredients and cut it out.

Align the push tool with the hole in the bottom of the mold and press out the contents.

Make cuts in the petal sections with a knife to easily separate them, allowing you to create three-dimensional designs. The result is a vibrant floral arrangement brimming with seasonal charm.

Power : Solar Cell
Meas. Range. -50~+70°C
Measurement Accuracy : ±1°C(10~40°C)
±2°C(-10~10°C)
±3°C(-30~60°C)

Measurement Period : Every 10 Seconds

Cord length : 1m

- Features a high-efficiency solar cell, eliminating the need for battery replacement and requiring no maintenance.
- Large, easy-to-read numeric display.
- Features a remote temperature gauge allowing you to check the interior temperature from outside without opening the door.

④ Solar Powered Digital Thermometer (Wide Range Type)

熱耐 超低温ソーラーデジタル温度計SN-1200

32-0109-0401

Size 103.5×15.5×H41.5
Pwr.supply : Amorphous Solar Cell
Meas. Range. -59.9~+99.9°C
(0.1°C per scale)
Measurement accuracy : ±1°C(-20~+40°C)
±2°C(Other)

Measurement Period : Every 10 Seconds

Cord length : 1m

Minimum unit : 0.1°C

- Industry-first wide-range solar thermometer
- IP65 waterproof rating ensures reliability near water. Eco-friendly thermometer requiring no battery replacement.
- Suitable for use in ultra-low temperature food storage units exceeding -55°C (for temperature management of frozen tuna, etc.)

⑤ Refrigerator Thermometer

温度計 冷蔵庫用 A

32-0109-0501

Size 135×24×H7
Meas. Range. -30~+50°C(1°C per scale)
Material : Polystyrene resin(with antibacterial agent)

- Double-sided adhesive sponge included
- Magnet included

Analog Refractometer

⑥ Handheld Refractometer

手持屈折計

32-0109-0601

Size 32×34×L168
WT. 120g
Meas. Range. Brix0.0~53.0%
Minimum scale:Brix0.5%
Measurement accuracy : no temperature compensation

- versatile measurement range, suitable for a wide variety of samples. Turbid samples are also advantageous compared to other instruments.

⑦ Mentsuyu Concentration Refractometer

濃度屈折計

32-0109-0701

Size 32×34×L168
WT. 90g
Meas. Range. Juice concentration 0.0~56.0%,Saline concentration 0.0~28.0%

Minimum scale : Juice concentration 1.0%,
Saline concentration 1.0%
Measurement accuracy : Juice concentration
±1.0%,Saline concentration ±1.0%(10~40°C)

This is a concentration meter with a scale for automatic temperature correction for soba and udon. The scales of saline, Ramen Kaeshi, spicy, and sweet juice are displayed.

- With automatic temperature compensation and waterproof function

Digital Salinity Meter

⑧ Digital Salt Meter

デジタル塩分計

32-0109-0801

Size 168×32×H18
Power : Button Battery(CR2032)×1pc

Disposable chopsticks

As a response to environmental destruction and ecological issues. These domestically produced cedar chopsticks are crafted from the finest salvaged wood—using offcuts and thinned timber left over from manufacturing products like pillars made from pure domestic cedar—and finished with the utmost care and beauty.

Cut diagonally

For serving chopsticks

For serving chopsticks

The rounded ends make the center flat for easy handling and prevent rolling.

"Iroha" Konro

Recreates the traditional Japanese aesthetic using aluminum alloy. Compatible with charcoal or solid fuel (ignition possible through air holes). Dishwasher safe and highly durable.

When using charcoal or solid fuel, always use the charcoal tray and base plate.
The mesh, charcoal tray, and base plate shown in photos are sold separately.

When using solid fuel, two 25g fuel tablets are sufficient for use as shown in the diagram. Placing the solid fuel beneath the air holes eliminates the need for a lighter to ignite it.

warning label

Paper-making pot with deep draw

- Set the paper-making pot so its bottom surfaces is parallel to the surface of the receiving mesh.
- Do not allow the bottom of the paper-making pot to touch the receiving mesh. If the paper touches the mesh, it may burn and develop holes.

- Be careful not to tilt the paper-making pot when setting it on the stove.
- Place the solid fuel in the center of the stove.

When set up as shown in the diagram above, the flames may flow sideways, and the area marked with a circle may catch fire.

- Make sure the broth covers at least two-thirds of the ingredients when they are added.

- Mochi and noodles tend to stick to the bottom and cause the paper to burn, so they cannot be used in a paper-making pot.

When using tofu, place the vegetables underneath.

- After placing ingredients in the paper pot or aluminum pot, do not leave them unattended for extended periods.
- Paper pot: ingredients may dry out, stick to the bottom, and cause the paper to burn.
- Aluminum pot: ingredients may weaken the aluminum's integrity, potentially creating small holes.

- For both paper-making pots and aluminum pots, use solid fuel sticks weighing 25g or less.
- Paper-making pot: The flame may become too large and cause burning.
- Aluminum pot: Due to the high heat output, solid fuel may undergo incomplete combustion, potentially causing eye irritation.

- When using an aluminum hot pot during winter, placing cold broth inside can cause condensation on the pot's exterior. If exposed to the flame of solid fuel, this may lead to incomplete combustion and cause eye irritation. Please use warm broth whenever possible.

- Be careful not to get the outside of the paper-making pot or aluminum pot wet with water. Also, ensure the receiving net is completely drained of water and does not wet the paper-making pot.

Heat the stones to the appropriate temperature (150° C to 180° C), then place your ingredients on them.

As a guideline, the stones should sizzle when a drop of water is placed on them.

※ Always use within the frame.

※ When using a portable gas stove or gas range, always use medium heat or lower.

Products featuring the
Gold Cut method

Cold-cut method

The ring is separated from the diamond using a diamond cutter,
then polished smooth with a diamond-coated file and finished by
flame-hardening.

The absence of a ring results in a clean, high-quality mouthpiece.
